Asset and People Monitoring

Obtain total visibility

CHALENGES

- Total Visibility
- Available data for Real Time Insight
- Enchance People Safety
- Detailed Reporting on People and asset moving

SOLUTION

Zebra Dart Ultra-Wideband (UWB) allows you to know in real-time the quantity, location and condition of all your assets.

HOW IT WORKS

UWB is designed for applications requiring accurate, precise, and high update rate real-time location.
UWB RTLS platform enables accurate asset and personnel visibility solutions.
The System includes:

- The System Builder
- The Dart Hub
- The Sensors
- The Dart Vision Reader
- The Dart Tags
- The Dart Wand Module

BENEFITS

AMAZING LEVEL OF VISIBILITY

Unlike other systems which limit sensors to specific coverage cells, Zebra's solutions can be used over your entire facility, yielding maximum coverage. With maximum coverage you will have visibility into your entire business and operations, providing you with actionable data in order to make smarter decisions.

EXCELLENT ACCURACY

Zebra's advanced UWB real-time location solution is capable of REAL-TIME LOCATION SOLUTIONS (RTLS) delivering thousands of tag blinks per second at up to 30 cm accuracy. This level of precision will allow your business to accurately forecast operations including inventory, work in progress and material flow.

TRACK IN REAL-TIME

Zebra's real-time technology will allow you to streamline and automate your business operations to harness the visible value chain for business intelligence. With smart operations your business will be able to execute and plan in real-time, increasing efficiently and creating new opportunities.
